Request for Re-Grade of Assignment 1
Nader Al-Naji (nbal)

For assignment 1 I missed a total of about nine points because my output "did not reproduce" on the machine it was being run on. Specifically, I missed points for
-Fun
-Rotate
-Floyd-Steinburg Dither
-Scale
-Saturation
-Extract Channel
but all of these reproduce perfectly when run on my computer. I believe this is because of a random portability issue and so I think if the assignment is graded on another computer I'll get the points. I tried downloading the zip file on two of my friends' computers (macs) and ran it there from scratch and it regenerated all the output I specified, so if you run the assignment on Vova's mac or something, I believe it will produce the desired result. Additionally, I missed half a point on my median filter for an unspecified reason but this also works exactly as specified. If you look at the code you will see that there is nothing wrong with it and I should get full points on that, too. It may seem to work incorrectly because it adds black speckle noise to the image—but that's only because of the nature of the image. The image has "salt-and-pepper" noise and so in deleting the "salt" (the white pixel noise), it introduces slightly more "pepper" (black pixel noise). This behavior is to be expected from the specification we were given so I believe I deserve a re-grade on this bit as well.

I'm very sorry for the inconvenience and I will do my best to try and avoid problems of this nature in the future.
